LEARNING OBJECTS

Who we are

We’re a learning innovation partner with higher education and learning science expertise. We collaborate with higher education institutions, publishers, and technology innovators to build cutting edge courses, programs, and learning experiences.

Using Difference Engine®, our next generation learning environment and tools, we design and deliver competency-based, personalized, and adaptive learning at scale - both at the course and program level.

Why Us

We have a long history of working with higher education institutions and education providers in creating rich learning experiences for students and faculty.

We lead with learning science, data analytics and a rich combination of content, technology and services – yours or ours – to co-create your personalized learning programs and experiences to support your education vision, mission and values.

We’re a learning innovation partner with higher education and learning science expertise.

How we work

Using a traditional LMS alone doesn’t make it easy for a curriculum team to design and manage courses and programs. Learning Objects makes it easier to manage entire programs as well as individual courses for campus, blended, and online learning.

We work closely and collaborate with your curriculum teams to understand your unique vision, strategy, and approach for digital and academic innovation. To meet today’s student expectations, institutions need a different type of partner that supports their academic vision in creating next generation learning experiences for their students.

What we offer

We offer curriculum design services which are based on sound learning science methodologies and best practices using next generation learning environment design tools. Key elements of our approach include:

- Collaboration with faculty and other subject-matter experts (SMEs)
- Use of instructional design best practices, including backward and model-centric design
- Authentic learning and assessment aligned with student learning outcomes
- Social and collaborative learning experiences for student engagement
- Real-time, actionable student performance data to empower faculty and teachers

A new kind of learning innovation partner.
How we do it

Difference Engine is our next generation digital learning environment and learning design tools. With Difference Engine, we collaboratively design and deliver courses, programs, and learning experiences in concert with your faculty, curriculum teams, and third-party content providers. Our authoring tools are designed to support centralized curriculum development with features like easy reuse, alignment with learning objectives, and robust versioning and publishing.

Difference Engine is configurable to meet your unique needs. By assembling modular parts, we create highly customized learning experiences without the prohibitive cost of custom software.

You don’t have to replace your LMS! Difference Engine learning experiences integrate nicely with your existing infrastructure. We work closely with other technology providers and implement many of the IMS interoperability standards, including:

- Learning Tools Interoperability (LTI)
- Caliper Analytics
- Question and Test Interoperability (QTI)

What makes us different

Difference Engine is cloud-based and requires no additional infrastructure or complex setup. We use Amazon Web Services to ensure the experiences we create are scalable and cost-effective. We are also LMS agnostic and can integrate our products and services with your existing platform.

Who we serve

Learning Objects works with higher education institutions, publishers, education technology innovators and other industry partners. At the institutional level we focus on both programs and courses.
